

## BUSINESS PC OR NETWORK

- Got a business Personal Computer or Network? NEED HELP? We Support and Design Networks for Small/Medium Businesses. We maintain and fix computers and Networks.
- We tailor our support and management service to your own business needs. We advise, consult and train.
- We have remote and on-site services—We can provide remote server based computing services for those that do not want the trouble of supporting their own PCs or LAN hardware.

This service can bring the assets of the PC and PC networking to your business operations without the need for costly investment in hardware and network support.

You will be able to buy and use most any common business software application that will run on our remote secure servers from a terminal installed in your premises using the Internet for access.

- Remote Network Support—PRINS - PacificRoot® Remote Internet Network Services powered by the world class N-Able Technologies N-Central Engine These services can be tailored to suit any organizations' network needs.

PRINS provides Secure & Reliable Network Monitoring, Secure Reporting & Service Escalation functions on the parameters and thresholds that you decide upon. PRINS allows you and your service organization to be PROACTIVE; it helps reduce the need for expensive and spontaneous REACTIVE mode after events and casualties have occurred.

**Call for more information! Get a free telephone review of your network monitoring and reporting needs. This system will provide its services from one network item to multiple items on an office LAN to multiple office WANs.**
